

Main Application: Time-of-Flight measurements with heavy ions.

Unless specified otherwise, supplied in E Mount for up to 40.0 μm thickness; in T Mount for $>40.0 \mu\text{m}$ thickness.

Active Area (mm ²)	Maximum Thickness Variation (μm)	Depletion Depth† 15 μm Range 7-15 μm	Depletion Depth† 25 μm Range 15.1-25 μm	Depletion Depth† 40 μm Range 25.1-40 μm	Depletion Depth 50 μm Range 40.1-65 μm	Depletion Depth 75 μm Range 65.1-85 μm	Depletion Depth 100 μm Range 85.1-110 μm

* All standard totally depleted detectors are cut off-axis from the parent crystal at a specific angle that will minimize channeling. Larger areas available on special order. Other areas and depths available on special order.

** First three digits of Model No. indicate total system noise width measured with standard ORTEC electronics and 0.5- μs shaping time constants. Noise width is given for the smallest thickness (largest capacitance) in each range and specified nominal area. For high-capacitance units, performance depends on actual thickness and area.

Mounting Arrangements

A This is a "ring mount"; i.e., the silicon wafer is offered on its ring without output connectors. This infrequently used arrangement is available on special request. For 40 μm to 100 μm detectors.

E This is a special type of transmission mount in which four screws can be carefully adjusted to avoid excessive pressure on particularly fragile silicon wafers. For up to 40.0 μm thick detectors.

T Microdot connector on the side of the can (open back) for depletion depth $>40.0 \mu\text{m}$.

†E Mounts may be disassembled by removing screws. V dimension provides distance between mounting holes that are 1.7 mm in diameter and suitable for 0.080 screws.

Dimensions are given in millimeters.
