The ORTEC Model 414A Fast Coincidence is a modular threefold coincidence unit that allows fast coincidence determination between any two or three input signals. The term “fast” indicates the general nature of the coincidence circuit; that is, input pulses are reshaped, and the actual coincidence determination is made on the leading edge, or leading portion, of the pulses. A dc-coupled anticoincidence input is provided to inhibit the coincidence output by a dc voltage or a pulse that overlaps the period of coincidence of the coincident pulses. The coincidence inputs are ac-coupled, and all four inputs are controlled by In/Out toggle switches.

The resolving time, \(2t\), of the fast coincidence unit may be varied over a 10- to 110-ns range by a 10-turn control for accurate resettability of the resolving time. The resolving time of the anticoincidence circuit is set by the width of the input pulse.

### Specifications

**PERFORMANCE**

- **PULSE PAIR RESOLUTION** <100 ns on any single input; for coincidence events, <1 µs on the coincidence output.

- **RESOLVING TIME** \(2t\) Continuously variable from 10 to 110 ns for coincidence signals; set by the width of the input pulse for the anticoincidence signal.

- **TEMPERATURE INSTABILITY** \(2t\) changes <±0.2%/°C from 0 to 50°C.

**CONTROLS**

- **RESOLVING TIME** \(10–110\) ns Front-panel 10-turn locking potentiometer for controlling resolving time for inputs A, B, and C over a range from 10 to 110 ns.

- **INPUT CONTROLS** Toggle switches for using any input combination desired and for disabling input signals to the coincidence and anticoincidence circuits without input coaxial cables having to be removed.

**INPUTS**

- **COINC** Front-panel BNC connectors provide 3 ac-coupled coincidence inputs (A, B, C) of positive polarity; 2-V threshold, 20-ns minimum width required; absolute maximum input 50 V; impedance >3000 Ω.

- **ANTICOINC** Front-panel BNC connector provides one dc-coupled anticoincidence input (D) for inhibiting coincidence output; +2 V threshold, 20-ns minimum width required; absolute maximum input 50 V; impedance >2000 Ω.

**OUTPUTS**

- **OUTPUT** Two separate buffered coincidence output signals through front-panel BNC connectors provide positive pulses ≥500 ns wide with 5-V minimum amplitude; ac-coupled with <10-Ω impedance; monitored through oscilloscope test points on front panel.

**ELECTRICAL AND MECHANICAL**

- **POWER REQUIRED** The Model 414A derives its power from a standard NIM bin/power supply. The power required is +24 V, 30 mA; –24 V, 30 mA; +12 V, 120 mA; and –12 V, 85 mA.

- **WEIGHT**

  - **Net** 1.09 kg (2.4 lb).
  - **Shipping** 2.0 kg (4.4 lb).

- **DIMENSIONS** NIM-standard double-width module 6.90 X 22.13 cm (2.70 X 8.714 in.) per DOE/ER-0457T.
